(For returns: [rma@u-ace.com](mailto:rma@u-ace.com))

INFANT RISK OF  
SUFFOCATION

## **⚠ To Reduce the Risk of Infant Suffocation**

1. Infants have suffocated on inflatable mattresses. Never place an infant or child younger than 3 years on an inflatable mattress.
2. Avoid entrapment between the mattress and vertical spaces created by walls, dressers and other furniture. When used by children over 3 years old, make sure there's ample space between the mattress and other objects. (We recommend at least a shoulder's width of space.)

## Additional Air Column Mattress Safety Tips

1. Always keep your air mattress fully inflated when in use.
2. Never use an air mattress in water.
3. Keep your air mattress away from fire.
4. Do not use flammable substances (like aerosol tire repair products) with your air mattress. The mattress may ignite or explode.
5. Keep the air mattress away from stairs, windows and sharp, breakable objects.
6. Never stand, walk or jump on your air mattress.
7. Always supervise children around air mattresses.
8. Inflate only with a low-pressure inflator. Do not over inflate.
9. During initial use, your air mattress may require additional inflation to maintain desired firmness as the air column structure settles. This is normal for the first few days of use.
10. Clean your air mattress with mild soapy solution. Do not use chemicals.
11. Use suitable repair patches and adhesive to repair punctures or leaks.
12. Always keep the breathable top surface of the mattress facing up.
13. Follow the above guidelines to avoid entrapment, suffocation, serious injury or property damage.
